Password « 1234 »

OK

Flash Parameters Operations

Following the procedure:

- Click on the Flash button
 - Select [v] Sorted parameters
 - Click on the Read from Flash button
 - Select [v] Read custom parameters in the flash memory
- Or
- Select [v] Read all existing parameters [2] to [2000]
 - Click on OK button to start the process...

The screenshot displays the 'Magix 3k Pulse on COM1 - Magix Control' software interface. The main window shows the 'Flash' button in the top right corner. Below it, the 'Magix on COM1' status is 'Running'. The 'Magix type' is 'Magix 3k Pulse' and the 'Software version' is '8.21'. The 'Login' field is set to 'Operator'. The 'Input setting' shows 'U setting: 500.0 [V]' and 'I setting: 12.00 [A]'. A 'Flash' dialog box is open, showing a list of parameters (empty) and a 'Read from Flash' button. A 'Flash Parameters selection' dialog box is also open, showing the 'Read parameter(s) only in the flash memory' option selected, with 'from: 2' and 'to: 2000' entered. The 'OK' button is highlighted. Red arrows point to various elements: 'Flash' (top right button), 'Your Login is Operator!' (Login field), 'Flash parameters' (Flash dialog box), 'all parameters' (Flash Parameters selection dialog box), 'List sorted parameters' (empty list in Flash dialog), 'Read from Magix Flash' (Read from Flash button), and 'Start the Process...' (OK button).
